A: I would suggest you to use the following code to read the contents of the file:

```
import java.io.FileInputStream; import java.io.FileOutputStream; import java.io.IOException; import java.io.InputStream; import java.io.OutputStream; import java.io.PrintWriter; import java.io.StringReader; public class CSVReader { public static void main(String[] args) { try { InputStream inputStream = CSVReader.class.getResourceAsStream("/calendars.csv"); if (inputStream != null) { InputStreamReader inputStreamReader = new InputStreamReader(inputStream, "UTF-8"); BufferedReader bufferedReader = new BufferedReader(inputStreamReader); String line = ""; String string = ""; while ((line = bufferedReader.readLine()) != null) { string += line + " "; } System.out.println(string); inputStream.close(); } else { System.out.println("The file: /calendars.csv does not exist. "); } } catch (IOException e) { e.printStackTrace(); } 2d92ce491b
```
