With KEYMACRO you can add a keyboard macro to your Windows operating system. A Keyboard Macro is a way to automate parts of your computer's operating system so you can perform frequently used tasks like switching between programs and different views. With KeyMacro you can record the actions you take on your keyboard. After recording, you can store a macro so you can repeat it later, when you need to do something similar. For example, you can choose a macro that automatically opens a specific application when you press the key combination "Ctrl + Alt + "F". Features: • You can define different macros per program and even per web page • Automatic storage of the macro definitions on your computer • Automatic execution of the macros at predefined times • Automatic execution of the macros on demand via hotkeys • Automatic execution of the macros when the keyboard is connected or disconnected • Automatic execution of the macros when the computer is turned on or off • Automatic execution of the macros at specific dates and times How to use: 1. Launch KeyMacro and choose the program you want to make into a keyboard macro. 2. Set the desired keyboard macros in the dialog box. 3. Start recording a macro by pressing the "Start" button. 4. Press the desired hotkey and KeyMacro will automatically repeat the defined macro. 5. The recorded macro is stored as a file in your harddisk. 6. Make sure that the "Store macro definition in the registry" checkbox is ticked so that KeyMacro will store the macro definition permanently. 7. The recorded macro can be executed via hotkeys, script files or a configuration file. For this, you need to define the action you want to execute in the dialog box as well. 8. The macro definitions can be exported to script files. 9. The current state of the macro definition can be viewed in the status window. If you want to, you can define the actions to be performed on demand or on demand and automatically. Please note that KeyMacro is an add-in for the Windows operating system, which means that you need to have administrative rights to install it. Installation: 1. Download the appropriate.exe file from the download page. 2. Double-click on the downloaded file to install KeyMacro. 3. The KeyMacro Setup Wizard will start and guide you through the installation.
