Version 24.5 includes nearly two hundred features to address all aspects of multimedia production and archiving. For example, video editing, photo editing and retouching, music editing, document conversion, and print output. .Methods of preparing primary cells or cell culture is widely known in the art. In general, cells are cultured in cell culture media, such as cell culture media containing fetal bovine serum or other like materials to support their growth, and by the addition of various differentiation and growth factors to control their growth and differentiation. In general, culture of cells involves two processes. The first is the attachment of cells to a surface. The second is the attachment of the cells to one another. In cell culture, these processes are carried out using cell culture media. Typically, to culture cells it is necessary to provide a cell-culture medium in which the cells can grow and divide. Cell culture media is usually prepared from a variety of substances which include the serum of a natural or synthetic origin and other nutrients and additives. Usually, the media comprises a complex mixture of components which includes proteins, amino acids, vitamins, minerals, sugars, and other substances required for cell growth. Conventional methods for culturing cells include flasks or roller bottles, cell culture dishes and Petri dishes. For example, roller bottles generally include a container, for example, a glass jar with a rubber coated bottom. The roller bottles are generally placed into a rotatable incubator with a shaker which produces a rolling action that tends to keep the bottle rolling. The bottle is generally rotated continuously for a period of time in order to allow the cells to attach to the sides of the bottle and to grow. However, the rolling action is also disruptive to the cells and can potentially injure them. In addition, the surface area of the bottle is limited and is therefore, of limited utility. Cell culture dishes generally have a similar design, but include a larger surface area and are reusable. However, the surface area of such dishes is limited. Cells cultured in cell culture dishes and Petri dishes can also be formed from non-reusable 2d92ce491b
