See also List of Windows Vista features List of Windows 7 features List of Windows 8 features List of Windows 8.1 features List of Windows 10 features Windows Vista Windows 7 Windows 8 Windows 8.1 Windows 10 References Category:Windows 10 \*06Q: Make Linux user to login using SSH/scp I have a Linux user on two different PC's. I have created his own user account on both PC's. I want to have a script that can SSH into one of the PC's and then to execute a command in that PC that will log in that user. The user should not be required to enter any username and password. A: Make sure that the user has an account on both machines and that each account is granted a home directory in the /home directory. Then you can do a chroot from one machine to the other and use the -t flag to the login command to specify that a login shell should be used: ssh user@ip -t 'login' A: You could look at pam\_mount. e.g.:  
user@remote:~\$ mkdir /tmp/remote user@remote:~\$ cd /tmp/remote  
user@remote:/tmp/remote\$ mkdir test user@remote:/tmp/remote\$ cd test  
user@remote:/tmp/remote/test\$ mkdir home user@remote:/tmp/remote/test
