You don't need a code for the Alcatel OneTouch Pixi 3. Enter your IMEI number and click "Next". If you have no code available, you will be prompted to send a WhatsApp message to .Q: When do you need dedicated servers for your web applications? I know that having dedicated servers is good for your application's performance, but I have been thinking if it is only for web apps. In particular, if you have a database, a web application and a website all on the same physical server, do you need dedicated servers? Or is it unnecessary? A: Dedicated servers are much cheaper then non-dedicated servers and will cost you only what it takes to rent a box, bring it up, and configure it to meet your needs. As for "web applications" I assume you mean web-hosting services, and the answer for that is yes, dedicated servers can improve performance. If you have your web application hosted somewhere that does not offer good support and you are required to use the shared infrastructure rather than a dedicated one, you will find that your application will perform worse than it could if you paid for your own dedicated server. /** * Copyright (c) Microsoft Corporation.
